

Our Services

IT Infrastructure, Security & AI: Built to Scale

EONSHIFT delivers end to end IT infrastructure, cybersecurity, and managed services that help mid to large enterprises in tech, finance, government, BPO, and trust & safety modernize with confidence. Every engagement is built on a security first foundation and tailored to the client's specific environment, from initial assessment through long-term support.

Managed IT Services

Your On-Demand Technology Experts

End to end IT management, monitoring, support, and maintenance delivered by a dedicated team of on-site and remote experts.

- Strategic IT planning
- Custom implementation
- 24/7 monitoring and support

Cloud Services & Migration

Scalable, Secure, and Cost-Efficient Cloud Solutions

Cloud architecture, migration, and modernization across AWS, Azure, and Google Cloud.

- Lower operational costs
- Enhanced scalability
- 99.9% uptime guarantee

Cybersecurity & Zero Trust

Protecting Your Business from the Inside Out

Zero Trust architecture, network security, identity management, segmentation, and continuous threat protection for organizations that can't afford to get security wrong.

- Zero Trust identity & access controls
- Real-time alerts & monitoring
- Regulatory compliance support

Network & Infrastructure

Secure, Fast & Future Ready Connectivity

Design, implementation, modernization, and ongoing management of enterprise IT infrastructure and global network deployments.

- Scalable architecture
- Minimized downtime
- Enhanced security & speed

Virtual Desktop & Digital Workspace

Empowering Remote Work with Secure VDI

Secure VDI and remote work environments that give employees reliable access to applications and corporate resources from anywhere.

- Centralized management
- Enhanced data security
- Flexible remote access

AI & Machine Learning Consulting Services

Production-Ready AI, End to End

Design and implementation of production-ready AI platforms, infrastructure, data, and model environments: the foundation for taking AI from pilot to production.

- **AI Data Preparation & Labeling:** Data preparation, annotation workflows, labeling tools, dataset quality control, and training/evaluation datasets.
- **AI Model Training & Optimization:** GPU training environments, fine tuning, testing, model optimization, versioning, and production pipelines.
- **AI Infrastructure, Deployment & MLOps:** Kubernetes, containers, CI/CD, model deployment, monitoring, versioning, and rollback.
- **AI Data Architecture & Storage:** Databases, object storage, vector/search databases, caching, and scalable AI data pipelines.
- **AI APIs & Inference Services:** Secure inference APIs, gateways, authentication, model serving, routing, and scalable AI services.
- **End-to-End AI Platform Architecture:** Integration of data, models, infrastructure, security, APIs, deployment, and operations into a cohesive AI platform.

IT Strategy & Consulting

Deep Insights That Drive Better Decisions

Technology strategy, architecture assessments, and modernization planning aligned with business objectives: from initial audit to implementation roadmap.

- Security & performance audits
- Infrastructure evaluations
- Roadmaps aligned to business goals

Business Continuity & Disaster Recovery

Resilience You Can Count On

Resilient infrastructure, backup, and recovery solutions that keep critical systems running through disruption.

- Backup & recovery architecture
- Rapid incident response planning
- Continuity for mission-critical systems

Ready to talk through your organization's technology roadmap?

Let's talk about where your infrastructure, security, and AI strategy need to go next.
